

Campus Placement FAQ (Synthetic Demonstration Dataset)

All company names are used purely for academic simulation context. All figures, statistics, eligibility criteria and package details in this document are SYNTHETIC / FICTIONAL and were generated for an AI/RAG coursework demonstration. They do NOT represent real placement outcomes, offers, or data from the named company, Chitkara University, or its Placement Cell.

Q1. What is the minimum CGPA required for placement?

It varies by company and is listed in each company's Drive Demo document; in this synthetic dataset it ranges from 6.00 to 8.00.

Q2. From which semester do campus placements begin?

Semester 6. There are no placement records for Semesters 1-5 in this dataset.

Q3. Can a student with an active backlog apply?

No, unless a specific drive explicitly states an exception (synthetic policy).

Q4. Can a student with historical (cleared) backlogs apply?

Yes, typically up to a maximum of 2 historical backlogs, subject to the specific drive's rules.

Q5. What does 'CTC' mean?

Cost to Company — the total annual compensation package, including base salary and variable/other components, expressed in INR LPA (Lakhs Per Annum).

Q6. What is the difference between average CTC and median CTC?

Average CTC is the arithmetic mean of all offers; median CTC is the middle value when offers are sorted, and is less affected by very high or low outliers.

Q7. What is 'Highest CTC'?

The single highest package offered by that company in that academic year.

Q8. What is 'Lowest CTC'?

The single lowest package offered by that company in that academic year.

Q9. How is Application Rate calculated?

$\text{Students Applied} / \text{Students Eligible} \times 100$.

Q10. How is Attendance Rate calculated?

$\text{Students Appeared} / \text{Students Applied} \times 100$.

Q11. How is Shortlisting Rate calculated?

$\text{Students Shortlisted} / \text{Students Appeared} \times 100$.

Q12. How is Selection Rate calculated?

$\text{Students Selected} / \text{Students Appeared} \times 100$.

Q13. How is Hiring Rate calculated?

$\text{Students Hired} / \text{Students Eligible} \times 100$.

Q14. Why might 'Selected' differ from 'Hired'?

Some selected students may decline the offer (e.g. due to a competing offer), so Hired can be less than or equal to Selected.

Q15. How many academic years of historical data are available?

Seven: 2019-20 through 2025-26.

Q16. Is the historical data real?

No. All historical figures in this dataset are synthetic, generated for an academic RAG/AI demonstration project.

Q17. How many companies are covered in this dataset?

Twenty companies, each with a Drive Demo document and a Historical Placement Data document.

Q18. Can I compare two companies' average CTC?

Yes — each company's Historical Placement Data document lists average CTC by year, enabling direct comparison.

Q19. What specializations are covered?

CSE, CSE (AI & ML), and CSE (AI & FT).

Q20. Is program-wise hiring data available?

Yes, each year's historical record breaks down hires by CSE, CSE (AI & ML), and CSE (AI & FT).

Q21. Is role-wise hiring data available?

Yes, each year's record lists roles hired for, with hire counts and CTC statistics per role.

Q22. Is semester-wise hiring data available?

Yes, hires are broken down into Semester 6, Semester 7 and Semester 8 for every company and year.

Q23. Why are there zero hires in Semesters 1-5?

Because campus placement activity begins only in Semester 6 under this university's placement policy (real and synthetic).

Q24. What happens if I ask about a company or year not in this dataset?

The assistant should state that the information is unavailable rather than inventing an answer.

Q25. What if two data points appear to conflict?

The assistant should flag the discrepancy rather than silently choosing one value, and recommend verification with the Placement Cell.

Q26. Are these CTC figures adjusted for inflation?

No adjustment is modelled; each year's figures are reported as generated for that year.

Q27. What is a 'bond' or 'service agreement'?

A minimum period a hired student agrees to serve the company before resigning, applicable to some companies in this dataset.

Q28. Does every company in this dataset require a bond?

No. Bond requirements vary; check the company's Drive Demo document.

Q29. What documents are required to apply?

Typically an updated resume, portal registration, transcripts, a valid ID, and a passport-size photograph (synthetic, illustrative).

Q30. What are the typical selection stages?

Online assessment, coding assessment (for technical roles), technical interview, and HR interview.

Q31. Is a coding round always present?

It is modelled for technical/software-oriented roles; some consulting-style roles may substitute a case-study or group discussion.

Q32. Can eligibility criteria change year to year?

Yes, each year's drive may adjust CGPA cutoffs, backlog rules, or role definitions; always refer to the specific year's drive document.

Q33. How do I find the highest-hiring year for a company?

Refer to the 'Seven-Year Historical Trend Summary' section of that company's Historical Placement Data document.

Q34. How do I find which company hired the most in a given year?

Compare the 'Hired' figures across all companies' historical documents for that year.

Q35. What is 'Average CGPA of selected students'?

The mean CGPA among students who were selected by that company in that year, as recorded in Section D of the historical document.

Q36. Are placement statistics cumulative or per-year?

Per-year, unless explicitly labelled as a seven-year aggregate/trend figure.

Q37. Can a student be hired in more than one semester?

No; each hired student is counted in exactly one semester bucket (6, 7, or 8) for a given year.

Q38. Do program-wise hires always add up to total hires?

Yes, by construction, for every company and year in this dataset.

Q39. Do role-wise hires always add up to total hires?

Yes, by construction, for every company and year in this dataset.

Q40. Where can I verify official, real placement information?

Always consult the official Chitkara University Placement Cell; this dataset is for AI demonstration only.

Q41. Can the assistant make an official eligibility decision for me?

No. The assistant can only provide information from this dataset; official eligibility decisions rest with the Placement Cell.
