

Placement Data Dictionary (Synthetic Dataset Field Definitions)

All company names are used purely for academic simulation context. All figures, statistics, eligibility criteria and package details in this document are SYNTHETIC / FICTIONAL and were generated for an AI/RAG coursework demonstration. They do NOT represent real placement outcomes, offers, or data from the named company, Chitkara University, or its Placement Cell.

Eligible

Number of students in the applicable programs/specializations who meet the CGPA, backlog and semester criteria for a given drive and academic year.

Worked example: Example: If 300 students meet the CGPA and backlog criteria for Company X in 2023-24, Eligible = 300.

Applied

Number of eligible students who submitted an application/registration for the drive.

Worked example: Example: Of 300 eligible students, 240 applied → Applied = 240.

Appeared

Number of applied students who actually attended the online assessment.

Worked example: Example: Of 240 applied, 228 appeared → Appeared = 228.

Shortlisted

Number of appeared students who cleared the assessment stage and were shortlisted for interviews.

Worked example: Example: Of 228 appeared, 96 were shortlisted → Shortlisted = 96.

Selected

Number of shortlisted students who were selected after interviews (offer made).

Worked example: Example: Of 96 shortlisted, 40 were selected → Selected = 40.

Hired

Number of selected students who accepted the offer and are counted as hired (Hired ≤ Selected).

Worked example: Example: Of 40 selected, 38 accepted → Hired = 38.

Application Rate

Percentage of eligible students who applied.

Formula: $\text{Applied} / \text{Eligible} \times 100$

Worked example: $240 / 300 \times 100 = 80.00\%$

Attendance Rate

Percentage of applied students who appeared for the assessment.

Formula: $\text{Appeared} / \text{Applied} \times 100$

Worked example: $228 / 240 \times 100 = 95.00\%$

Shortlisting Rate

Percentage of appeared students who were shortlisted.

Formula: $\text{Shortlisted} / \text{Appeared} \times 100$

Worked example: $96 / 228 \times 100 = 42.11\%$

Selection Rate

Percentage of appeared students who were ultimately selected.

Formula: $\text{Selected} / \text{Appeared} \times 100$

Worked example: $40 / 228 \times 100 = 17.54\%$

Hiring Rate

Percentage of eligible students who were ultimately hired.

Formula: $\text{Hired} / \text{Eligible} \times 100$

Worked example: $38 / 300 \times 100 = 12.67\%$

Average CTC

Arithmetic mean of the CTC (Cost to Company) offered to all hired students, in INR LPA.

Formula: Sum of all offered CTCs / Number of Hired

Worked example: $(\text{INR } 6 + \text{INR } 6 + \text{INR } 7 + \text{INR } 5) / 4 = \text{INR } 6.00 \text{ LPA}$

Median CTC

The middle CTC value when all offered CTCs are sorted in ascending order.

Worked example: Sorted CTCs [5,6,6,7] $\rightarrow$ median = $(6+6)/2 = \text{INR } 6.00 \text{ LPA}$

Highest CTC

The single highest CTC offered among hired students in that year.

Worked example: Max of [5,6,6,7] = INR 7.00 LPA

Lowest CTC

The single lowest CTC offered among hired students in that year.

Worked example: Min of [5,6,6,7] = INR 5.00 LPA

Average CGPA

Mean CGPA (10-point scale) among selected/hired students.

Formula: Sum of CGPAs / Number of students

Worked example: $(8.1+7.8+8.4)/3 = 8.10$

Minimum CGPA

The lowest CGPA among selected/hired students, or the drive's stated cutoff.

Worked example: Min of [8.1,7.8,8.4] = 7.80

Semester-wise Hiring

Break-down of Hired count by the semester (6, 7 or 8) in which the offer/joining was finalised. Values for Semesters 1-5 are always 0.

Formula: Sum over Sem 6+7+8 = Total Hired

Worked example: Sem6=8, Sem7=22, Sem8=8 $\rightarrow$ Total = 38

Program-wise Hiring

Break-down of Hired count by specialization: CSE, CSE (AI & ML), CSE (AI & FT).

Formula: Sum over all programs = Total Hired

Worked example: CSE=20, AI&ML=12, AI&FT=6 $\rightarrow$ Total = 38

Role-wise Hiring

Break-down of Hired count and CTC statistics by job role offered.

Formula: Sum over all roles = Total Hired

Worked example: Role A=24, Role B=14 $\rightarrow$ Total = 38
